Summary

Engineering Lead with 10+ years of experience building enterprise platforms, backend systems, and AI-powered business applications. Experienced in translating complex business requirements into scalable software and leading technical initiatives from architecture through production. Focused on building practical, maintainable solutions that simplify operations and solve real business problems.

Core Expertise

Engineering Leadership • Enterprise Software Architecture • Backend Engineering • System Design
Enterprise Integration • AI & LLM Integration • Technical Strategy • End-to-End Delivery

Work Experience

Engineering Lead
Tanjungenim Lestari (Marubeni Subsidiary) · Jan 2021 – Present
Jakarta / Muara Enim, Indonesia
Promoted from Senior Software Engineer (Jan 2021 – Oct 2025)

- Architected and led the development of TEA (Tanjungenim Enterprise Application), a unified enterprise platform supporting 1,500–2,000 users and connecting core business processes across SAP, Exaquantum, Forte, and IoT systems.
- Designed and delivered EasySAP, a modular SAP extension and integration platform that simplifies access to SAP-driven business processes through custom enterprise workflows and reduces dependency on direct SAP access.
- Played a key technical role in the SAP implementation, leading enterprise integrations between SAP, internal applications, and vendor systems across procurement, inventory, and finance processes.
- Introduced AI capabilities into TEA using RAG and LLM orchestration, enabling natural-language access to enterprise information and reducing manual data lookups.
- Architected and delivered the Vendor Interface Platform (VIP), consolidating vendor management, e-billing, and e-procurement workflows into a single integrated platform.
- Led technical strategy and end-to-end delivery for enterprise applications, owning architecture decisions, system integration, development, deployment, and production reliability.

Tech: Go · TypeScript · Node.js · Vue.js · ABAP · .NET · PostgreSQL · Oracle · GCP · SAP · RAG / LLM Orchestration

Senior Backend Engineer
Astro Technologies Indonesia · Nov 2024 – May 2026
Jakarta, Indonesia · Remote

- Designed and implemented a high-performance API gateway using Kong, Protocol Buffers, and gRPC, optimizing request handling and service-to-service communication across backend systems.
- Built an automated anomaly detection and monitoring system that identifies invalid or inconsistent event data and automatically triggers real-time Slack alerts, enabling faster detection and operational response.
- Designed a scalable data validation pipeline using Redis for caching, BigQuery for large-scale validation, and Google Cloud Pub/Sub for event-driven processing and automated notifications.
- Implemented event-driven backend workflows with Pub/Sub, enabling asynchronous processing and reliable communication across monitoring and data services.

Tech: Go · gRPC · Kong API Gateway · Protocol Buffers · PostgreSQL · Redis · BigQuery · Google Cloud Pub/Sub · Slack API

Senior Backend Engineer
VMI · Jan 2024 – Dec 2024
Kuala Lumpur, Malaysia · Remote

- Architected and delivered a hospital surgical planning platform, transforming complex master plans into daily operating schedules while coordinating procedures, operating rooms, clinical resources, and scheduling constraints.
- Designed real-time backend workflows for surgical scheduling, keeping operational plans synchronized and reliable as schedules and resource availability changed throughout daily hospital operations.
- Developed an intelligent Hadith classification and verification system, detecting potentially fabricated content and categorizing records based on authenticity and classification.
- Built an automated university scheduling engine, generating conflict-free schedules across campuses, faculties, lecturers, classrooms, and laboratories, with Excel-based bulk data import and automated schedule generation.
- Designed a GIS-based environmental monitoring platform for the River Ranger Program, combining geographic data and image-based analysis to assess flood risk and automate condition reporting.

Tech: Go · Python · FastAPI · Java / Spring Boot · TypeScript · React · PostgreSQL · SQL Server · MariaDB · AWS

Senior Software Engineer
Join Development · PT Bukit Asam Tbk. · Nov 2019 – Dec 2020
Muara Enim, South Sumatra, Indonesia

- Led development initiatives for executive information and spend management systems as part of Bukit Asam's enterprise digitalization platform.
- Designed and delivered enterprise applications spanning executive analytics, procurement, spend management, vendor management, legal services, and internal knowledge management.
- Built operational systems supporting mining activities, including fleet monitoring, coal production and logistics, overburden operations, safety reporting, and coal delivery tracking.
- Developed data-driven monitoring solutions for energy management and mining operations, providing real-time operational visibility and supporting business decision-making.
- Contributed to the broader CISEA digital ecosystem, integrating business and operational workflows across multiple functions within Bukit Asam.

Tech: Node.js · TypeScript · Angular · PHP / Laravel · SQL Server · Oracle · Leaflet.js

Software Engineer
Bina Darma Technology · Mar 2019 – Jul 2019
Palembang, South Sumatra, Indonesia

- Delivered public-sector and education platforms, including a province-wide village information portal supporting local government communication and public access to community information.
- Built a student admissions platform that digitized enrollment workflows, reduced manual administration, and improved management of applicant data.

Tech: PHP · Laravel · CodeIgniter · Vue.js · React · Python · MariaDB

Software Engineer
Regional Revenue Agency of South Sumatra Province · Jan 2018 – Dec 2018
Palembang, South Sumatra, Indonesia

- Developed a digital motor vehicle tax payment platform for South Sumatra Province, supporting the modernization of public tax services and providing taxpayers with a more accessible payment experience.
- Built data migration and integration tooling to transform legacy `.dat` records into MySQL-compatible data, bridging legacy government systems with modern application infrastructure.

Tech: Kotlin · PHP · Laravel · CodeIgniter · Vue.js · MySQL · MariaDB · IBM Informix

Software Engineer
Global Pelita Mandiri · Feb 2017 – Jan 2018
Palembang, South Sumatra, Indonesia

- Developed hospital management systems for two regional healthcare institutions, supporting patient administration, scheduling, medical records, and day-to-day hospital operations.
- Built backend and web application components for healthcare workflows, consolidating operational and administrative data into integrated information systems.

Tech: PHP · Laravel · CodeIgniter · Python · Vue.js · MariaDB · MySQL

Software Engineer
Al Fariz Course Center · **Jan 2016 – Dec 2016**
Palembang, South Sumatra, Indonesia
- Built an expedition and travel management system for Ceria Travel, digitizing operational workflows and supporting day-to-day booking and service management.

Tech: PHP · Laravel · CodeIgniter · Python · Vue.js · MariaDB · MySQL

Technical Skills

Languages
Go • TypeScript • JavaScript • PHP • ABAP • Python
Backend
Node.js • .NET • FastAPI • Spring Boot • gRPC • REST APIs
Frontend
Vue.js • React • Next.js • Angular
Data
PostgreSQL • SQL Server • Oracle • MariaDB • Redis • BigQuery
Cloud & Infrastructure
GCP • AWS • Azure • Kong API Gateway • Pub/Sub
Enterprise
SAP • Microsoft Dynamics AX • IFS
AI & LLM
RAG • AnythingLLM • LLM Orchestration • OpenClaw • Hermes

Education

Master of Informatics Engineering
IT Enterprise Infrastructure
Bina Darma University • 2019–2022

Bachelor of Information Systems
Information Technology
Bina Darma University • 2014–2019

Publications

Exploring ERP User Behaviour in Developing Countries: Integrating Self-efficacy and UTAUT Perspectives
DOI: 10.1109/ICADEIS58666.2023.10270956

Certifications

- **SAP Partner (Asseta International)** – BC400 (ABAP Workbench Foundations)
- **CertiProf** – Scrum Professional Foundation (SFPC)
- **CertiProf** – Remote Work & Virtual Collaboration Professional (RWVCPC)
- **International CyberSecurity Institute UK** – Certified Network Security Specialist (CNSS)
- **Indonesian Professional Certification Authority** – Programming & Software Development
- **Hacktiv8** – Scalable Web Services with Golang
- **Programmer Zaman Now** – Go Programming From Beginner to Advanced
- **Alterra Indonesia** – Backend 101 (Golang)
- **Dicoding Academy** – AWS Cloud Practitioner Essentials
